Salesforce Certified Marketing Cloud Administrator | Salesforce Certified Marketing Cloud Email Specialist | Salesforce Certified AI Associate | Salesforce Certified AI Specialist

I turn customer communication into systems that run themselves.

Salesforce Marketing Cloud Specialist. Over the past 2+ years I've built marketing automation end to end — journeys, CloudPages, SQL, SMS, integrations and platform administration — shipping 100+ production changes for an enterprise client in a highly regulated industry, from the first stakeholder conversation to go-live and long-term support.

production changes shipped	reachable contacts validated	hands-on Salesforce Marketing Cloud	Salesforce certifications

IMPACT AT A GLANCE

Outcomes, not just builds.

Every number below traces back to a specific piece of work in production.

~50,000
manual calls removed per year (projected)
Automated outreach for 8 appointment-request work queues, replacing ~200 manual attempts a day.

1.43M
contactable patients validated
Rebuilt channel-preference logic after finding a data-type defect in reach counts.

~688K
unique patients engaged in 6 months
Email and SMS journeys across care programs.

6.4M+
dead contacts purged
Monthly purge program with automated reminders, cutting billable contacts and storage.

8 of 8
SMS short codes passed carrier re-audit
Fixed in under 4 weeks, protecting every patient SMS program.

25,000+
recipients in the largest single send
Ad hoc campaign cleaned, deduped and launched in 10 days.

Same day
to 48-hour urgent turnaround
Clinic closures, construction and road notices added to live reminders.

0
missed security deadlines
OAuth secret rotated 2 days early, with a runbook for every future cycle.

20+
weekly reports, fully automated

18 months of send history in self-running reports for leadership.

HOW I WORK

End to end ownership, on a lean team.

The go-to owner for journeys, CloudPages, SQL and platform administration, working directly with clinical leaders, operations and marketing.

01	02	03	04	05	06	07
Discover	**Architect**	**Build**	**QA**	**Change control**	**Go-live**	**Support**
Stakeholder intake and requirements	Data model, segmentation and flow	SQL, AMPscript, SSJS, journeys, pages	Test sends and record validation	Owner sign-off and approvals	Launch, throttling and monitoring	Runbooks, docs and handover

SIGNATURE WORK

Seven workstreams I owned end to end.

Delivered for a large US healthcare client, from the first stakeholder conversation through architecture, build, QA, change control, go-live and long-term support. The same patterns carry to any industry running Marketing Cloud.

01 · Patient outreach

Patient outreach automation at health-system scale

Schedulers worked referral queues line by line, an outside vendor ran pre-registration calls, and quality teams had no automated way to reach patients overdue for diabetes, pediatric or screening care. Every missed contact was a missed appointment, a missed quality measure and lost revenue.

~50,000
manual outreach attempts a year taken off staff (projected)

WHAT I ARCHITECTED AND DELIVERED

- **Referral work-queue automation, 8 queues across 2 service lines.** Data extensions, SQL automations and Journey Builder flows that turn every referral order into a timed email and SMS sequence, with reason codes written back cleanly to the patient record.
- **In-house pre-registration program that replaced an outside vendor.** Daily Epic EHR file over SFTP, header-less import, SQL segmentation for consented patients with appointments in the next 30 days, multi-step email and SMS, and a results file back to the EHR. Solved UTF-16 to UTF-8 encoding, layout changes, age-gated AMPscript personalization, weekend suppression and reminder spacing.
- **Diabetes (HbA1c) quality-gap journey, built from zero**, iterated with the quality team, with encounter logging and holiday-aware due dates.
- **Value-based care enhancements:** 90- and 180-day pediatric overdue tiers, hospice exclusions across every value-based journey, and high-risk cervical-screening annual-letter logic.
- **Gynecology patient-education journey** across 16 visit types in a rolling 30-day window — and when the planned microsite slipped, I built the landing page in SFMC to hold the launch date.

BUSINESS IMPACT

- Automated ~200 daily queue contacts, building on an earlier phase that cut referral contact effort by nearly 50%.
- Outside pre-registration vendor replaced by a closed-loop program the team fully controls.
- Journeys now cover diabetes, pediatric and adult preventive, Medicare wellness, colorectal and breast screening, and specialty education.
- Clinical safety built in: hospice patients excluded system-wide, scheduled patients no longer told to schedule, weekend and holiday due dates back-filled. Every journey signed off by its clinical owner.

02 · CloudPages engineering

Apps built inside the marketing platform

Departments kept asking for event sign-ups, live audience interaction, surveys and opt-out pages — and the default answer was a new vendor, a new contract and another data silo. Meanwhile one business unit was quietly losing subscribers, including its own staff.

$0

in new software for a ~600-invitee symposium, run end to end on existing licenses

WHAT I ARCHITECTED AND DELIVERED

- **7-page live-event engagement platform** for an annual pharmaceutical symposium: save-the-date waves, a registration CloudPage with walk-in editing, a registration-to-confirmation journey that drops registrants from reminders, QR-driven live polling, per-speaker Q&A loaded from data extensions and a moderator control panel. Demoed to senior stakeholders including a VP, with a user guide and event-day support.
- **Post-event survey application** with reminder, thank-you and auto-closed states, and response export to the business.
- **Two-step unsubscribe center** that email-security bots can't complete but real people can — designed, tested, demoed and documented in 5 days.
- **Advisor program sign-up forms** that block under-18 submissions by date of birth and accept only staff email domains.
- **Branded 404 experience** across 3 business units, an internal journey dashboard in the new brand, SMS compliance pages and an in-platform patient-education microsite.

BUSINESS IMPACT

- Subscriber leakage stopped at the source, with opt-out kept fully compliant.
- Under-18 participants blocked at the front door, closing a consent and patient-safety gap.
- Launch dates held even when outside dependencies slipped.

03 · Campaign operations

Rapid-response patient communications

The person operations and marketing call when a message has to go out right, in every language, by tomorrow. In healthcare, a wrong date, number or audience is a patient-experience failure, not a typo.

Same day

a medical-director-priority road-closure notice went live the day it was requested

WHAT I DELIVERED

- **15+ end-to-end campaigns** from intake to tracking report: newsletters, a partnership announcement, billing-change notices, a recruitment drive with dynamic primary-care-provider personalization, a payment-plan push and an urgent-care conversion launch.
- **Operational notices injected into live appointment reminders**, scoped by department ID and visit type so only affected patients see them — construction, parking, road closures and a kiosk self-arrival pilot.
- **Multilingual relocation campaign** across email, SMS and CloudPages, with a rolling year-long SQL schedule that keeps only each patient's earliest visit.
- **~20 QR codes and branded short links** with scan-performance reporting and self-service guidance.

BUSINESS IMPACT

- 25,000+ recipients in a single send, cleaned, deduped and launched within 10 days of receiving the list.
- A campus construction notice went from department list to live in 2 days.
- Every launch gated by test sends and sign-off from each business owner.

04 · Compliance & governance

Compliance, security and platform health

In one year the platform faced a carrier audit flagging 8 SMS short codes, a mandatory 180-day OAuth rotation with a hard deadline, millions of dead contacts and daylight-saving shifts that could knock every send time off by an hour.

8 of 8

short codes passed carrier re-audit in under 4 weeks

WHAT I DELIVERED

- **SMS short-code compliance rescue.** Researched CTIA requirements, worked with Salesforce support, traced unexpected traffic to API calls opting subscribers in through an unused short code, built Terms and Privacy pages on CloudPages and updated every opt-in confirmation.
- **OAuth client-secret rotation across 7 API installed packages.** Aligned Marketing Cloud, Health Cloud and external API teams with an action plan defining responsibilities, validated the new secret with a Postman authentication test, activated it and wrote the runbook for future 180-day cycles.
- **SMS consent data-flow mapping** end to end across Marketing Cloud, Health Cloud, MuleSoft and Epic EHR, tracing undocumented configurations to support integration troubleshooting.
- **Monthly governance program** — import field checks, deactivation of users inactive 90+ days and a dead-contact purge, turned from a manual chore into a batched automation that alerts the team when to act.
- **Daylight-saving automation** that recalculates send-time offsets for every journey each year, peer-verified before go-live.

- **Access fixes:** a knowledge-base article and a rewritten new-user setup guide to stop repeat tickets.

BUSINESS IMPACT

- Every patient SMS program protected from suspension.
- 6.4M+ dead contacts purged, cutting billable contact volume and storage.
- Security deadline beaten by 2 days, and the next rotation fully documented.
- Every journey protected from time-change drift for years ahead with one automation.

05 · Data & analytics

Data engineering and executive reporting

Data views keep only 6 months of history, patient data arrives from several systems, reports were pulled by hand — and the key number, how many patients can actually be reached, was quietly wrong.

1.43M

contactable patients, validated for the first time

576K	111K	738K
email only	text only	both

WHAT I DELIVERED

- **Self-running reporting suite** in Automation Studio: monthly value-based care send history, weekly and monthly referral volumes, per-queue hourly sends and weekly pre-registration volume — no manual pulls.
- **Historical send archive** that snapshots email and SMS activity before it ages out of data views, making year-over-year reporting possible.
- **Executive analysis packs:** referral email performance, message-fatigue analysis by channel and journey step, and 12-month volume reporting for leadership presentations.
- **Reach metrics** joining _Sent, _Job, _JourneyActivity, _Journey and _SMSMessageTracking with normalized subscriber keys.
- **Data-quality fix:** boolean preference fields were evaluated as 0/1 in SQL while displaying as True/False, breaking channel-reach counts. Found it and corrected the logic.
- **SQL and data-governance audit:** analyzed 680+ SQL Query activities against data-retention needs across 10 CRM-synchronized data extensions, flagging 10+ unbounded queries for storage optimization.
- **API migration inventory:** every journey mapped to source system, cadence, CRM objects and fields in active use, plus retention windows by object.

BUSINESS IMPACT

- ~688K unique patients reached in 6 months — the baseline for contact-frequency strategy.
- 18 months of trend data and 20+ consecutive weekly reports delivered automatically.
- API migration scoped from facts, not guesses.

06 · Brand & strategy In progress

System-wide brand migration and platform strategy

Retiring a brand in marketing automation means hundreds of assets across three business units, multilingual patient scripts, templates that must match the EHR's patient emails — and a sending-domain change that, done wrong, wrecks deliverability.

Selected

my new-brand email template became the standard for EHR alignment

WHAT I'M DELIVERING

- **Full asset inventory** with tracker files per business unit, so every email, SMS, CloudPage and template has an owner and a status.
- **New-brand email template** designed with the EHR communications team.
- **Script de-branding** across colorectal and breast screening, Medicare wellness, pediatric preventive, annual wellness and opt-out confirmations, in every language.
- **Sending-domain and Sender Authentication Package plan** with Salesforce support and the account team, toward a December go-live window.
- **Strategy briefs for leadership** on branded SMS via RCS, branded link shortening and attachment-based data sends.

BUSINESS IMPACT

- One consistent patient-facing brand across EHR and marketing email.
- Deliverability protected by planning the domain change before cutover, not after.
- Decision-ready options for leadership, each with a clear next step.

07 · Incident response

Fast root-cause analysis when patient messages go wrong

Patient-facing errors closed quickly, with documented root causes — protecting patient trust and keeping clinical owners confident in automation.

WHAT I RESOLVED

- **Missed weekend patients:** screening journeys skipped patients whose due dates fell on weekends. Fixed the logic and back-filled every missed patient the same week.
- **Reminders to already-scheduled patients:** traced a parent's report to appointment-status logic letting cancelled and unlisted visit types through; rewrote the query and validated with sample records.
- **Wrong "join now" link on phone visits:** changed reminder logic so virtual visits show the right instructions, promoted through change control.
- **Two-way SMS dashboard counts:** found why confirm and cancel clicks weren't counting and restored accurate reporting.
- **Broken links and outdated numbers** across discharge, referral and GI outreach in every channel, plus a deliverability investigation with Salesforce support.

OPEN SOURCE

Beyond client work: a tool I'm building for every marketer.

A personal open-source project, built in my own time, to solve a problem I've seen in every marketing team.

Need Marketing Cloud that runs itself? Let's talk.

Open to Salesforce Marketing Cloud and marketing automation roles in any industry, and to project work with teams who need journeys, CloudPages and data done right.
